PRODUCT INFORMATION

COOLANT PUMPS AND OIL-COOLER MODULES WITH ALUMINIUM HOUSING

Motorservice provides premium quality and product improvements for the aftermarket. Motorservice has now expanded its range to include a variety of coolant pumps and oil-cooler modules from Pierburg that have a different housing material. Specialist expertise was used to determine why there was an increased failure rate, and a robust aluminium housing was developed to improve it. In these products, the series product housing is made of plastic. In the parts now offered by Motorservice, the housing material has been optimised to lower the failure rate.

Products with plastic housings tend to crack due to temperature and/or vibration, and leak coolant as a result. This can result in an electrical short circuit. The more robustly constructed aluminium housings of the coolant pumps and oil-cooler modules from Pierburg reduce the problems in the originally installed products.
